

Assignment 1

1) Write a program to do:

- Read a linked list from the user.
- Ask the user to select a target value (V).
- Find the node which carries (V).
- Display the total of the nodes in the interval
 - That precedes the (V) by 3 cells.
 - Also those nodes that follow the (V) by 3 cells

e.g → V : 60

2) Write a program to do:

- Read 2 linked lists from the user.
- Display the position and the value for any 2 matched nodes.

e.g.
